Milestone

We have reached our third and last milestone.

Sixty-six people registered for Arbitrum Hacker House on Luma:
https://lu.ma/z1kaje11

Names, affiliation and geographic locations of registered people are available here:
https://github.com/iberoam/hacker-house-arbitrum/tree/main#registered-participants

From those 66, 11 groups were self-organized:
https://github.com/iberoam/hacker-house-arbitrum/tree/main#groups

All documentation and code created and used for the whole Arbitrum Hacker House (6 regular session plus 1 extra) is available at our GitHub:

https://github.com/iberoam/hacker-house-arbitrum

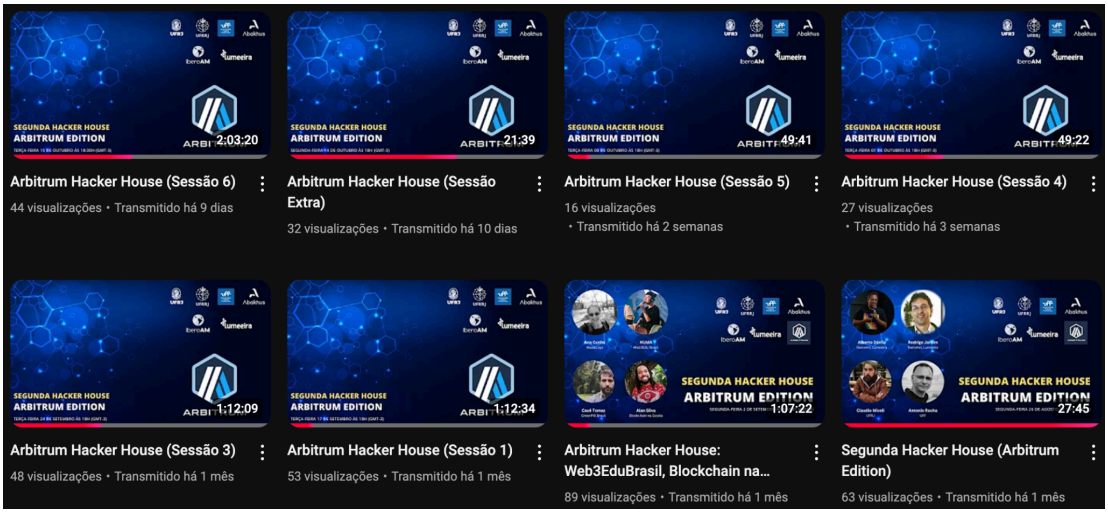

Specifically, the example front-end code used to teach registered participants is here:

https://github.com/iberoam/hacker-house-arbitrum/tree/main/frontend-dApp

Additionally, a demo and fully functional dApp using Abakhus Protocol and Arbitrum that was developed and used to teach registered students is here:

https://github.com/iberoam/hacker-house-arbitrum/blob/main/registroINPI.zip

We promissed 6 Arbitrum Hacker House sessions but delivered 7 sessions. All 7 sessions are publicly available at our Youtube channel:

Announcements

Arbitrum Hacker House announcements were posted in IberoAm social media, including a YouTube live presentation with regional communities as Museu.xyz, Web3EduBrasil, GreenPill-Brasil and Blockchain na Escola

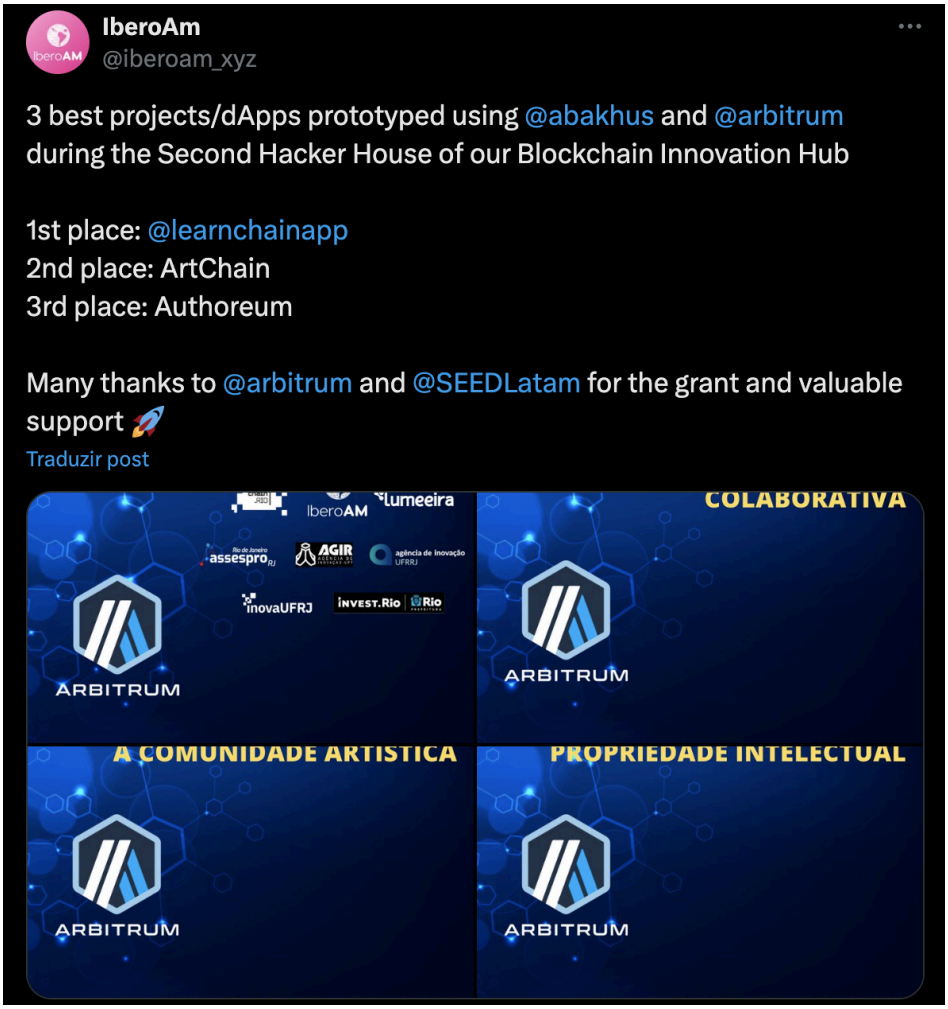

https://x.com/iberoam_xyz/status/1829529581390627104

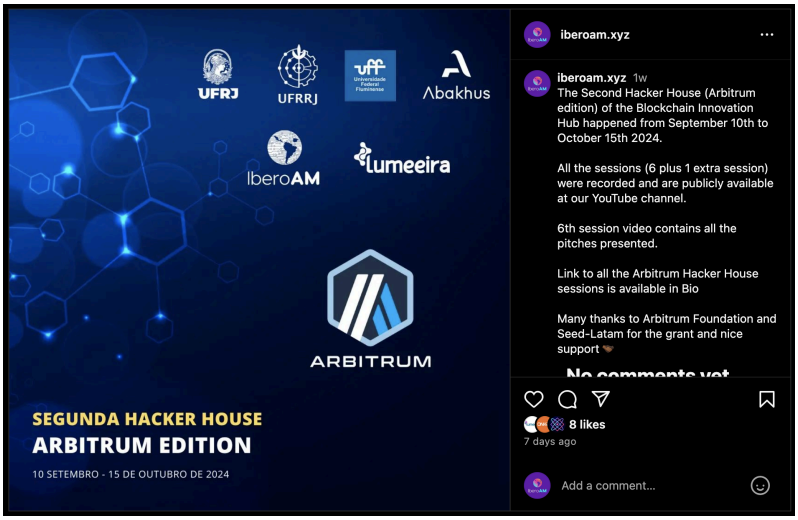

Arbitrum Hacker House related posts tagging Arbitrum in X were not possible between Milestones 1 and 2 because X was blocked by Brazilian Supreme Court:

https://www.theguardian.com/technology/article/2024/sep/02/brazils-supreme-court-upholds-x-ban-over-conduct

Towards Milestone 3, X was unblocked in Brazil then we posted the news about Arbitrum Hacker House and announced the selected best 3 projects/dApps in our IberoAm social media:

Best 3 projects/dApps selection:

After careful evaluation of all presented pitches, the consensus of the 4 Hacker House mentors was to rank the following best 3 projects/dApps:

1st place: LearnChain
GitHub
https://github.com/LearnChainApp/

Contracts
Arbitrum Sepolia: 0xD5a867a8Cb1bB037D7E8176644aDA0D281dc0293
Arbitrum One: 0xa1f48e7827a9296133FE21A36a8F561B0eBD9DFA

2nd place: ArtChain
GitHub
https://github.com/PedroCo3lho/ArtChain-dapp/tree/main

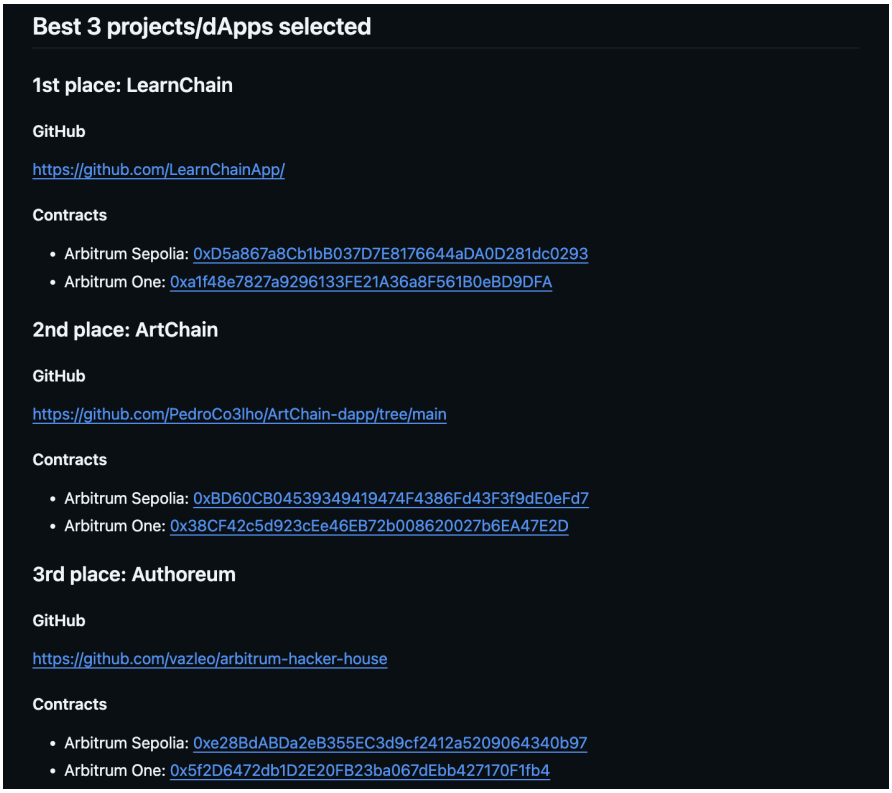

Contracts
Arbitrum Sepolia: 0xBD60CB045393494194 74F4386Fd43F3f9dE0eFd7
Arbitrum One: 0x38CF42c5d923cEe46EB72b008620027b6EA47E2D

3rd place: Authoreum
GitHub
https://github.com/vazleo/arbitrum-hacker-house

Contracts
Arbitrum Sepolia: 0xe28BdABDa2eB355EC3d9cf2412a5209064340b97
Arbitrum One: 0x5f2D6472db1D2E20FB23ba067dEbb427170F1fb4

Pitches of all projects, including the best 3 selected are available in Session 6:
https://www.youtube.com/live/OltQ3PXihaM?si=q_e0YLaehy4rNMh-

Github code and contract addresses links of those 3 projects are also available at Arbitrum Hacker House GitHub:

https://github.com/iberoam/hacker-house-arbitrum/tree/main#best-3-projectsdapps-selected
